

Purpose: Develops a whipping motion for maximum velocity on pitches.

Setup: Two players set up about 10 feet apart.

Instructions:

1. Pitchers stand in this version of the “L” Drill.
2. To start, they put their throwing hand with the ball above their head; their glove is straight in front of them, pointed at the target.
3. They whip their arm down and throw to their partner. As they throw they shift their weight toward the target.

Coaching Tips:

- The pitchers should be “flowing” toward their target by shifting their weight forward.
- They should start with their legs shoulder-width apart and then take a small stride forward while driving off the back leg.
- The keys in this drill to watch are alignment and mechanics.
- Run the drill for 3-5 minutes or 25-35 repetitions.
